

C Programming language

Low level	Mid Level	High Level
It works on bits , pointers and registers. Eg. Cobol,pascal, Fortan,assembly etc	It contains 50% features of low level and 50% Features of high level. Eg. C & C++	They are machine independent and they Follows another methodology like OOPs (object oriented programming). Eg. Java ,python C# etc

1. Mother language
2. Mid level programming language
3. Procedure oriented programming. Language
4. Structured programming language
5. System programming language

1. Mother Language : most of the compilers ,JVMs and Drivers are written in c.

JVM : Java virtual machine (Major component of java which is responsible to run the java programs)

- 2.System programming language : Some operating systems can be written by c like Unix and we can also write the kernal in c.

3.Procedural programming lang. : it follows some steps by step procedure to execute a program.

4.Structured programming language : it breaks the program into smaller blocks to solve a typical problem.

History of C :

In 1972 at American telephone and telegraph (AT &T) bells lab USA

Dennis Ritchie Developed the C programming language.

Environment Setup :

Text Editor :-

Eg. Notepad,Notepad++,
Sublime,atom,brackets,
Vs code etc.

Compiler :-

GCC (GNU compiler
collection) ,bcc,MinGW,
onlne gdb compiler

Device (Terminal) :-

command prompt,
powershell,Terminal
etc.

IDE : Integrated Development Environment (ide = text editor + compiler + terminal + intellisence etc)

Eg. Turbo C/C++ ,code blocks, dev c/c++ , eclipse ,visual studio (> 20 GB) etc.

My Combination : VS code + GCC + powershell /cmd

For Begginers : dev c/c++ ,code blocks
